

Himalayan Expeditions

1) Introduction:

This project serves as an analysis of the historical Himalayan Expeditions data where I explore questions of how many peaks have been climbed, the percentage of peaks successfully climbed, and who had the highest number of successful summits.

2) Data Description:

The data is from the Himalayan Expeditions dataset from Maven Analytics, which includes history about expeditions, member information, and details about peaks.

3) Data Cleaning:

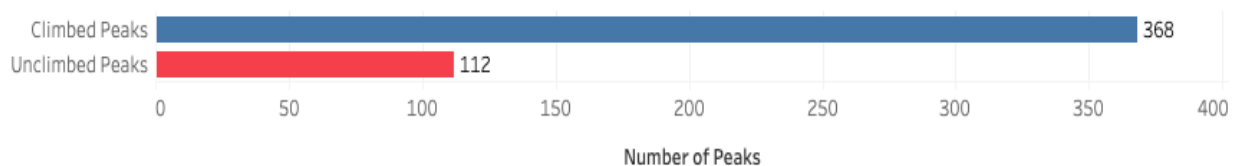

- Checked for null values in peak name and peak id
- Checked for peak id duplicates
- Reviewed distinct values for pstatus
- Checked for duplicates in member id and expedition id in the Members table

4) Analysis Summary:

The amount of peaks climbed is 368 out of 480 total peaks. This results in 76.66% of all possible peaks being successfully climbed. The person with the most successful expeditions is Paul Marc Grobel with 64 successful expeditions.

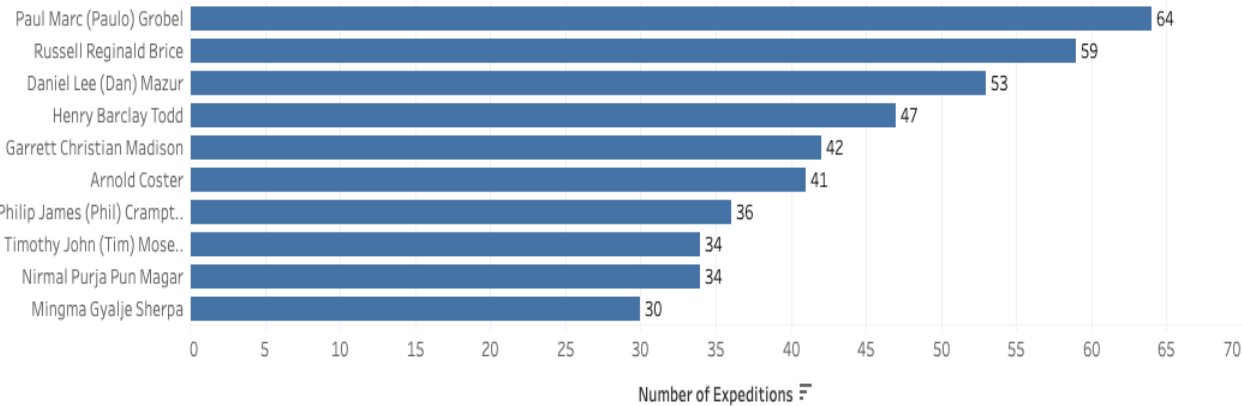

5) Visualizations:

Climbed vs. Unclimbed peaks

Number of climbed vs unclimbed peaks out of 480 total peaks, resulting in 76.66% of peaks being climbed successfully.

Top 10 Successful Expeditions

The top 10 people with the most successful expeditions in descending order.
